

# Early Autumn Tree Trail

## Large Group

This cage contains the first of our Japanese Maples. There are hundreds of varieties of Japanese Maples, having been bred and crossed to create dazzling coloured leaves or bark or exotic leaf shapes.

**A722, 723, 724**

### Coral Bark Maples

*Acer palmatum 'Sango kaku'*

The brilliant coral colour of the bark is the outstanding feature of this maple and gives it its name which means 'coral tower'. Leaves are green with a reddish margin which turn to an overall golden yellow colour in autumn. The younger the tree the brighter the colouration.

**A681**

### Japanese Maple 'Suminagashi'

*Acer palmatum 'Suminagashi'*

A distinctive bright purple leaved variety turning crimson in the autumn.

**A719**

### Japanese Maple 'Tamuke yama'

*Acer palmatum 'Tamuke yama'*

Another red leaved Japanese Maple, new leaves changing from deep crimson to very dark purple red and finally bright crimson in autumn. The leaves are also very deeply dissected

**A675**

### Japanese Maple 'Bloodgood'

*Acer palmatum 'Bloodgood'*

This cage has two red-leaved Japanese Maples of the Bloodgood variety with more Coral Bark Maples nearby.

**A302**

### Rowan Winter Cheer

*Sorbus Winter Cheer*

Autumn colour is not just about leaves, berries too have a range of rich autumnal hues. Here the first of our berry colours is the orange of the Rowan Winter Cheer which as its name suggests lasts well into winter to brighten the dark days.

**A303**

### Chinese Rowan

*Sorbus esserteauana*

This Chinese Rowan, also known as Esserteau's Rowan, produces masses of deep red berries.

▲ [Back to map](#)

**A433**

### Chinese Rowan

*Sorbus esserteauana flava*

This is a clone of the Esserteau's Rowan, which has yellow berries.

**B494**

### Coral Bark Maple

*Acer palmatum 'Sango kaku'*

Although noted for its coral coloured bark this particular example provides a brilliant flash of bright golden yellow foliage through the trees when viewed from Lime Avenue.

**B158**

### Downy Japanese Maple

*Acer japonicum 'Vitifolium'*

This mature Japanese maple is an early turner, the large vine leaf like leaves turning from gold to crimson to scarlet in early autumn.

**B341**

### Mountain Maple

*Acer spicatum*

This maple is not from Japan but Eastern North America, ranging widely across the far north and spreading south along mountain ranges. The tree grows as understory beneath canopy trees in moist woods on rocky hillsides and along streams.

**C200**

### Japanese Maples

*Acer palmatum*

As you pass through the Autumn Garden you will see many varieties of mature Japanese maples. These maples were planted in the 1960s as part of the original planting scheme under the guidance of Sir Richard Cotterell then the Chairman of Queenswood Coronation Fund. Sir Richard was the driving force behind establishing the arboretum and it's to his love and knowledge of trees that we owe the presence and appearance of the mature trees in the Arboretum today. The maples are of a number of different varieties for which records have not survived.

▲ [Back to map](#)

### Oak Avenue

Oak Avenue contains a wide variety of Oaks from around the world, you will find these at various stages of colouration depending on their variety and when you visit.

▲ [Back to map](#)

**G366**

### Scarlet Oak

*Quercus coccinea*

One either side at the beginning of the avenue, perhaps the brightest of the Oaks, from Central and Eastern North America the leaves turning bright scarlet in autumn.

▲ [Back to map](#)

**F261**

### Chinese Spindle

*Euonymus lanceifolios*

This spindle, native to central and western China, produces masses of striking pink (poisonous) berries.

▲ [Back to map](#)

**F490**

### Sugar Maple

*Acer saccharum*

We return to maples, this one from North America and Canada. This is the leaf on the Canadian flag and the tree most often tapped for its sap to make Maple Syrup.

▲ [Back to map](#)

**F69**

### Japanese Maples

*Acer palmatum*

You will pass another small collection of mature Japanese Maples.

▲ [Back to map](#)

**K317**

### Red Maple

*Acer rubrum 'Schlesingeri'*

To your right a little way off Queens Ride are two Red Maples of a variety known for its early deep rich scarlet autumn colour.

▲ [Back to map](#)

**E286/287**

### Cappadocian Maples

*Acer cappadocicum*

A group of maples native to the Caucasus and Western Asia. There are a number of varieties here; the *Aureum's* leaves turn golden yellow in the autumn whereas the *Rubrum* has pinkish margins to its leaves.

▲ [Back to map](#)

**B107**

### Japanese Rowan

*Sorbus commixta*

This tree's leaves have good later autumn colour but early in the season it will produce huge quantities of bright red berries.
