THE COUNTY OF HEREFORDSHIRE DISTRICT COUNCIL (SOUTH WYE TRANSPORT PACKAGE – A4194 SOUTHERN LINK ROAD) COMPULSORY PURCHASE ORDER 2018

THE COUNTY OF HEREFORDSHIRE DISTRICT COUNCIL (SOUTH WYE TRANSPORT PACKAGE – A4194 SOUTHERN LINK ROAD)(CLASSIFIED ROAD)(SIDE ROADS) ORDER 2018

STATEMENT OF CASE OF THE ACQUIRING AUTHORITY

Department of Transport Ref: NATTRAN/WM/LAO/157

19th June 2018
1. **INTRODUCTION**

1.1. This is the Statement of Case of the County of Herefordshire District Council in its capacity as local highway authority (the “Council” and the “Acquiring Authority”) explaining the reasons and justification for the making of The County of Herefordshire District Council (South Wye Transport Package – A4194 Southern Link Road) Compulsory Purchase Order 2018 (the “Order”) and The County of Herefordshire District Council (South Wye Transport Package – A4194 Southern Link Road) (Classified Road) (Side Roads) Order 2018 (“the Side Roads Order”) (together “the Orders”). It is produced to comply with Rule 7 of the Compulsory Purchase (Inquiries Procedure) Rules 2007 and Rule 16 of the Highways (Inquiries Procedure) Rules 1994.

1.2. The purpose of this Statement of Case is to put forward at the forthcoming Inquiry which is due to be conducted by the Secretary of State unless all statutory objections are withdrawn, before deciding whether to confirm the Orders. These inquiries are required under the Highways Act 1980 and Acquisition of Land Act 1981 to be held in order to afford any statutory objector an opportunity of appearing before and being heard by a person appointed by the Secretary of State for that purpose. Accordingly, the Secretary of State intends to hold Public Local Inquiries into the above Orders.

1.3. To date there are six remaining statutory objectors to the Orders. As noted below there are also a number of non-statutory objectors as reflected in Appendix 1.

1.4. This Statement of Case also sets out the reasons why the use of the powers contained in the Order are necessary and why there is a compelling case in the public interest for the Order to be confirmed by the Secretary of State. This Statement of Case is intended to supplement, but not replace, the Statement of Reasons, which accompanied the Orders.

1.5. The Council reserves the right to alter or extend this Statement of Case as necessary.

*Summary Description of Orders*

1.6. On 16 November 2017 the Council resolved to make both the Order and the Side Roads Order.

1.7. The land and interests over land proposed to be compulsorily acquired pursuant to the Order are comprised by areas of and interests in land within the South Wye area of Hereford and are described in greater detail in section 4 below.

1.8. The Orders were made on 5th March 2018 and the Council published notices for the Order and the Side Roads Order in the Hereford Times on 8th March 2018 and 15th March 2018. Notices were also posted on site. Notices were served on those persons listed in the Order and on those persons prescribed under Schedule 1 Highways Act 1980 (the “1980 Act”) in respect of the Side Roads Order. Notice of making the Side Roads Order notice was also published in the London Gazette on 8th March 2018.
1.9. The Order is made pursuant to sections 239, 240, 246, 250 and 260 of the 1980 Act for the acquisition of all interests (except any specifically excluded) in the land shown coloured pink (the “Order Land”) on the plans attached to the Order (the “Order Plan”), and as described in the Schedule to the Order.

1.10. The Order is being sought to enable the construction of a new single carriageway (two lane) road, of approximately 3.6 kilometres in length, and associated works (the “Scheme” or “Underlying Scheme”). The new road will run between the A49/B4399 junction (more specifically the Ross Road/Rotherwas Access Road roundabout) to the A465 and B4349 Clehonger Road to the south of Hereford. The road will be known as the Southern Link Road (the “SLR”).

1.11. The Scheme is the subject of a valid planning permission dated 18 July 2016.

1.12. The SLR is one element of the “South Wye Transport Package” (“SWTP”), which aims to promote economic development by unlocking the barriers to economic growth in Hereford by:

(i) reducing congestion and delay;
(ii) enabling access to the Hereford Enterprise Zone (“HEZ”);
(iii) reducing the growth in traffic emissions;
(iv) reducing traffic noise;
(v) reducing accidents; and
(vi) encouraging physical activity.

1.13. The Council is seeking to assemble in its ownership the land as set out in the Order to facilitate and enable the Scheme. The Order will enable the acquisition of the interests in the Order Land and new rights over the land coloured blue on the Order Map for the purposes of carrying out the Scheme. In addition to promoting the CPO, the Council has made the Side Roads Order in order to carry out works to existing highways as well as private means of access which are necessary to enable the SLR to be built.

1.14. It is currently planned that the Scheme will be completed by the end of 2020.

Summary of justification for the Orders
The Order

1.15. The most recent government guidance on the compulsory purchase process was published in February 2018 and entitled “Guidance on Compulsory purchase process and The Crichel Down Rules” (the “Guidance”).

1.16. The Council has considered the Guidance carefully. The Council fully recognises that a compulsory purchase order (‘CPO’) can only be made and subsequently confirmed where
there is a compelling case in the public interest (paragraph 2 of the Guidance) which justifies interfering with the human rights of those with an interest in the land affected by the CPO.

1.17. The Council also fully recognises that a CPO is intended as a last resort to secure the assembly of all the land needed for the implementation of projects and to that end has and continues to seek to resolve matters by means of negotiation with those with an interest in the land affected by the CPO. However, in light of the importance of the SLR and the need to implement existing planning permission the Council considers that it can demonstrate in all the circumstances that there is a compelling case in the public interest, which is explored further below in section 7.

The Side Roads Order

1.18. With regard to the requirement for and justification for the Side Roads Order the Council considers it can also meet the statutory test namely that another reasonably convenient route is available or will be provided before the relevant highway or private means of access affected by the Side Roads Order is stopped up.

2. STRUCTURE OF THE STATEMENT

2.1. This Statement of Case has been prepared in accordance with the Guidance and has been divided into the following sections:-

2.1.1 Explanation of use of the particular enabling power(s) (section 3);
2.1.2 Description of the Order Land and location, topographical features and present use (section 4);
2.1.3 General description of the Scheme (section 5);
2.1.4 The need for the Scheme (section 6);
2.1.5 The justification and need for the Order (section 7);
2.1.6 The Justification and need for the Side Roads Order (section 8);
2.1.7 Planning position (section 9);
2.1.8 Human Rights considerations (section 10);
2.1.9 Funding (section 11);
2.1.10 Land required for mitigation of the effects of the use and existence of the SLR (section 12);
2.1.11 Special Considerations affecting the Order Land (section 13);
2.1.12 Responses to objectors (section 14); and
2.1.14 Other information that might be of interest to those affected by the Order (section 15).
3. **EXPLANATION OF USE OF THE PARTICULAR ENABLING POWERS**

*Order related powers*

3.1. The 1980 Act empowers the Council to compulsorily acquire land which it requires for the construction and improvement of the highway and for the purposes of mitigating any adverse effects.

3.2. Section 239 of the 1980 Act enables the Council as the highway authority for the area to “acquire land required for the construction of a highway, other than a trunk road, which is to become maintainable at the public expense”, as well as any land required for improvement of the highway.

3.3. Under section 240 of the 1980 Act, the Council as the highway authority may acquire land required for the use in connection with construction or improvement of the highway.

3.4. Section 246 of the 1980 Act allows the Council to acquire land for the purpose of mitigating any adverse effect that the existence or use of the SLR may have on its surroundings.

3.5. Section 250 of the 1980 Act allows the Council as the highway authority to acquire rights over land, both by acquisition of those already in existence, and by the creation of new rights.

3.6. Section 260 of the 1980 Act allows the Council to override restrictive covenants and third party rights where land acquired by agreement is included in a compulsory purchase order.

3.7. **Side Roads Order Powers**

3.8. Section 14 of the 1980 Act enables the Council as the highway authority to make an order to stop up, divert, improve, raise, lower or otherwise alter a highway that crosses or enters the route of a classified road or is affected, or will be affected, by the construction or improvement of the classified road and, to construct a new highway for the purposes concerned with any alteration and for any other purpose connected with the classified road or its construction.

3.9. Section 125 of the 1980 Act enables the Council as the highways authority to stop up any private means of access to premises adjoining or adjacent to land comprised in the route of a road, or forming the site of any works authorised by the Order, and to provide a new means of access to any such premises.

4. **DESCRIPTION OF THE ORDER LAND AND LOCATION, TOPOGRAPHICAL FEATURES AND PRESENT USE**

4.1. The Order Land (being the land, interests and new rights over land proposed to be compulsorily acquired pursuant to the Order) comprises approximately 33.4 hectares. This comprises 328,675.51 square metres for which title to the Order Land is required and 5,315.90 square metres for which rights over land are required for access to, constructing
and maintaining structures and culverts and the provision of drainage to the SLR. The Order Land in some areas covers a wider area than the route corridor for the SLR as it includes land that is required for construction purposes, drainage, landscaping and mitigation.

4.2. The Order Land, which is in a variety of ownerships, is rural and largely comprises arable fields, small woodlands and coppices, farmland, and part of the garden of one residential property.

4.3. The topography of the Order Land is undulating, rising from approximately 85m Above Ordnance Datum (AOD) in the north to approximately 105m AOD in the south. Two brooks pass within the Order Land: Withy Brook and Newton Brook. There are also small scattered woodlands and orchard trees, including Grafton Wood (which is categorised as Ancient Semi-Natural Woodland) and veteran trees.

4.4. Full details of the Order Land appear in the Schedule to the Order and known interests and new rights to be acquired are recorded in the Schedule. The Schedule has been prepared based upon information gathered through meetings with the landowners, inspection of Land Registry title documents and information provided by owners and occupiers following the service of section 5A of the Acquisition of Land Act 1981 notices.

4.5. Part of the Order Land described within the Schedule to the Order is necessarily required for construction and siting of the SLR and will be retained in perpetuity. However, other parts of the Order Land and related rights will be returned or rather offered back to the owners on completion of the Scheme under the application of the Crichel Down rules.

4.6. The only private residential property affected by land take is Pykeways with the loss of approximately 135sqm of garden land equating to just under 7% of the total land area of the property.

4.7. The total loss of agricultural land is identified as being 31.2ha and sixteen field units would be crossed by the proposal. The land crossed is a mixture of Grade 2 (very good quality) and Grade 3 (good to moderate quality) agricultural land with a small area of Grade 1 land at the very north of the Scheme route. Further agricultural land will be used for construction areas but will be returned to agricultural land on completion of the Scheme.

4.8. The extent, description and situation of the Plots as they appear in the Schedule to the Order and which make up the Order Land, and the reason for their inclusion in the Order, are set out in the table below.

<td>This is 149.66 square metres of land to the rear of Pykeways, Allensmore. The land will form part of the new SLR highway and supporting embankments.</td>
</tr>
<tr>
<td>8</td>
<td>This is 39.72 square metres of land providing part access to arable land directly southeast of Pykeways, Allensmore. The land will be used to form a new turning head for vehicles at the top of the lane near Pykeways, including the Council’s refuse vehicle serving Pykeways.</td>
</tr>
<tr>
<td>9</td>
<td>This is 133.55 square metres of Golden Post Road, north of Golden Post Cottage Hereford with Pykeways to the north east. The land will be used to form a new turning head for vehicles at the top of the lane near Pykeways, including the Council’s refuse vehicle serving Pykeways.</td>
</tr>
<tr>
<td>10</td>
<td>This is 6,722.58 square metres of arable land to the south east of Pykeways and on the east side of Golden Post Cottage, Belmont, Hereford. The land will form part of the SLR highway and supporting embankments. Part of the land near the south east within this parcel will be used in connection with the new A465 Roundabout.</td>
</tr>
<tr>
<td>11</td>
<td>This is 7,075.91 square metres of public highway known as A465, Abergavenny Road, Hereford north east of Golden Post Cottage. The highway on this land will be stopped up and then used for the new SLR highway and supporting embankments, as well as construction of the new A465 Roundabout. Part of the land currently used as A465 Abergavenny Road will be improved, to provide for enhanced access to the SLR and Roundabout.</td>
</tr>
<tr>
<td>12</td>
<td>This is 63,480.83 square metres of arable land which leads east and south east from A465 Abergavenny Road to Haywood Lane. The majority of this land will be used to form part of the SLR highway and supporting embankments, as well as construction of the new A465 Roundabout. Part of the land near to the new roundabout will be used for construction of an attenuation basin.</td>
</tr>
</tbody>
</table>
| 12A | This is 50,067.28 square metres of arable land to the south east of A465, Abergavenny Road with Golden Post Cottage to the north. This is land required for the provision of a site compound for the duration of the
construction of the scheme for storage and parking of vehicles and materials in relation to construction of the new highway. Unless dealt with by agreement with the landowner, the land will be restored, or rather offered back, to the original owners following completion of the new highway under the Crichel Down Rules. Also, a new means of access is to be built near the north east corner of this plot of land, to enable access to the field from Abergavenny Road once the road has been upgraded.

12B This is 1,065.28 square metres of arable land south east of A465, Abergavenny Road with Golden Post Cottage to the north. The land is required for Dedicated rights, to provide for a public footpath and to enable the Council to access the Newton Brook underpass for maintenance and repair.

12C This is 7,322.64 square metres of arable land to the south of Hayleasow Wood, Hereford. The land is to be acquired for the construction of a new attenuation pond.

12D This is 468.24 square metres of arable land to the south of Hayleasow Wood, Hereford. The land is required for construction of a new footpath, in order to link up and provide access to the public footpath HA3 to the east, the Newton Brook underpass and the footpath at plot 12B.

12E This is 666.85 square metres of arable land to the south of Hayleasow Wood, Hereford. The land is required for purposes connected with enabling the completion of the works to construct the footpath but will no longer be required after the works are completed. Unless dealt with by agreement with the landowner, it is therefore to be restored or rather offered back to the original owners following completion of the new highway under the Crichel Down Rules.

12F This is 937.88 square metres of arable land to the south of Hayleasow Wood, Hereford. The land is required for purposes connected with enabling the completion of the works to construct the footpath but will no longer be required after the works are completed. Unless dealt with by agreement with the landowner, it is therefore to be restored, or rather offered back, to the original owners following completion of the new highway under the Crichel Down Rules.

12G This is 18,535.81 square metres of arable land to the south of Merryhill Park, Belmont with Haywood Lane to the east. This is land required for the provision of a site compound for the duration of the construction of the scheme for storage and parking of vehicles and materials in relation to construction of the new highway. Unless dealt with by agreement with the landowner, the land will be restored, or rather offered back, to the original owners following completion of the new highway under the Crichel Down Rules.

12K This is 612.24 square metres of arable land to the south of Hayleasow Wood, Hereford. The land is required for drainage rights to provide an outfall from overland flows heading towards Clehonger link, runoff from the SLR highway embankments and flows from the ditch.

12L This is 193.65 square metres of arable land to the south of Hayleasow Wood, Hereford. The land is required for drainage rights to provide an outfall from the SLR highway drainage.

13 This is 790.55 square metres of public highway known as Haywood Lane, Hereford to the north of Haywood Lodge Cottages. The land is owned by
Herefordshire County Council as highway authority. The land is required to build the new SLR highway and supporting embankment, as well as to construct a new overbridge to allow Haywood Lane to continue over the SLR highway.

</tbody>
</table>
5.  **GENERAL DESCRIPTION OF THE SCHEME**

5.1.   The line of the proposed SLR is shown on the map in Appendix A.

5.2.   The SLR would start as a new arm on the A49 (Ross Road)/B4399 (Rotherwas Access Road) roundabout heading northwest through existing hedgerow and across arable farmland. The SLR passes through Grafton Wood with a new culvert located east of the wood to convey ditch flows. A construction compound (the Eastern Construction Compound) will be on a parcel of land to the south east of Grafton Wood and upon completion would be planted as a rich native broad-leaved woodland with adjacent pond.

5.3.   The middle of the public footpath GF3, which runs from the A49 to Grafton Hamlet will be severed by the proposed SLR where it leaves the northern side of Grafton Wood. The footpath will be diverted to run along the fenceline of the southern edge of the SLR to a new...
termination point on Grafton Lane, near the property known as The Green. The northern part of the footpath will be extinguished. A new footway through the new underpass on Grafton Lane will connect to a new public footpath created in a field to the north of the SLR, west of Grafton Lane.

5.4. Travelling westwards the SLR climbs on an embankment, crossing over Grafton Lane by way of a new structure to be known as the Grafton Lane Underpass. This allows vehicular, pedestrian, cycle and equestrian users to continue to use Grafton Lane. Grafton Lane will be lowered slightly to ensure sufficient clearance for motorised vehicles to pass beneath the proposed SLR in accordance with highway design standards. To the west of Grafton Lane a watercourse known as Withy Brook will be culverted underneath the SLR.

5.5. Continuing westwards the SLR is raised on embankment over a new wildlife underpass known as the Central Underpass. This is located in line with an existing hedgerow and established bat flight path.

5.6. In order to cross over the Hereford to Newport railway line, the SLR will climb onto an embankment and the railway crossing will be a single span bridge structure known as the “Railway Underbridge”. This structure has been designed to ensure compliance with the minimum headroom requirements for the railway as well as providing access underneath the bridge structure for bridge maintenance and connectivity to both sides of the SLR.

5.7. Public footpath HA7 crosses the field situated to the west of the railway and a localised diversion will be provided for the public footpath to route a section of the footpath along the combined farm accommodation/bridge maintenance track which will be provided immediately west of the railway, underneath the bridge. Furthermore, the section of the footpath HA7 leading down from Haywood Lane to the railway line will be altered to run along the field margin (where people currently walk) rather than diagonally across the field, which is the currently used definitive line of the footpath.

5.8. The proposed SLR continues in a northwesterly direction across arable farmland and underneath Haywood Lane. A section of Haywood Lane, where it crosses the SLR, will be raised marginally as part of the overbridge works at this location. During construction an area of land to the north of the SLR at Haywood Lane Overbridge is proposed as the Central Construction Compound which will be reinstated to agricultural use on completion of construction of the SLR.

5.9. The SLR will continue in a northwesterly direction towards the A465 (Abergavenny Road) with a culvert allowing the SLR to cross Newton Brook. The SLR severs the northernmost section of public footpath HA3, which runs from Merry Hill to the A465. An underpass (the Newton Brook Underpass) allows bats and other wildlife to pass beneath the proposed scheme and is also the diversion route for footpath HA3, as well as a potential route for agricultural vehicles/machinery to access severed land south of the SLR. The land to the southeast of the A465 and southwest of the SLR would be used as the Western Construction Compound and reinstated to agricultural use on completion of the construction of the SLR. From the Newton Brook Underpass public footpath HA3 will run westwards along the
northern side of the field hedgeline to reach public bridleway HA6 which connects to the A465. The northern section of the existing footpath HA3 will be extinguished.

5.10. A new roundabout is proposed on the A465 to link in with the proposed SLR. A new link road from the roundabout, about 580m long, is also proposed to connect the B4349 (Clehonger Road) at a point to the south of Clehonger Court and Copper Beeches. The proposed road, passes on the northern side of the dwelling known as Pykeways and south west of properties known as 1 and 2 Forest View. The road also crosses an unclassified road known as Golden Post Road that runs between the A465 and B4349.

5.11. Short sections of the B4349 and Golden Post Road (located north-west of Pykeways) will be stopped up to motorised traffic. Access to Pykeways will be from the A465 end of Golden Post Road only, near Golden Post Cottage. Access to existing properties on the B4349 (east of Forest View Cottages) will be via the existing A465/B4349 T-junction. However, through routes will be retained on the B4349 (west of Forest View Cottages) for non-motorised users and maintenance vehicles only, to connect with the new road.

5.12. The B4349 will intersect with the A465 via the Clehonger Link, and new roundabout on the A465. The Clehonger Link will sever the northern end of public footpath CH9 which currently terminates on the southern side of the B4349 opposite the entrance to Clehonger Court. The new footpath termination point will be a gate on the southern fenceline of the new link road. The alignment of public footpath CH9 south of this point will remain unaltered.

6. **THE NEED FOR THE SCHEME**

6.1. The Council has been considering options to address transport-related problems in South Hereford for a number of years. A range of technical studies undertaken over the last 15 years have concluded that a combination of new highway links on the periphery of the town should go hand-in-hand with investment in active travel modes of walking, cycling and public transport, with supporting funding of non-infrastructure measures such as behaviour change and demand management.

6.2. A requirement for a new road between the A49(T) and A465 was set out in the Unitary Development Plan (2007), the Herefordshire Local Plan Core Strategy (2015) (the “LPCS”), the Infrastructure Delivery Plan (2014) and Herefordshire’s Economic Vision. The SLR that is now proposed sits within a section of that proposed highway corridor.

6.3. The concept of a southern link road is part of a larger goal identified in the Local Transport Plan (2016-2031)(the “LTP”) which sets out plans to support economic and social inclusion within the county by improving the transport network and access to services. It contains in particular a series of important objectives including those as set out in paragraph 6.17 below.

6.4. Analysis has identified a series of inter-related problems and issues in the South Wye area which arise both now and into the future, as follows:
Transport pressures arising from economic growth and development, including increasing traffic flows and longer and unreliable journey times, and the cap on development trips from the HEZ as a condition of the Local Development Order;

- No direct route between the A49 and A465 to enable vehicle journeys, including freight, to avoid the urban area of Hereford for accessing the HEZ;
- Drivers re-routing onto unsuitable alternative roads south-west of Hereford to avoid congestion;
- Vehicle traffic contributing to poor air quality and high noise levels in premises close to the A465;
- Reliance on car journeys for short trips by some residents;
- Low levels of physical activity;
- Substantial day-to-day variation in bus journey times;
- The design of and traffic levels on the main roads, which act as a barrier to making journeys by cycle or on foot;
- A high proportion of road collisions in the area resulting in injuries to pedestrians and cyclists; and
- Public perception of road danger which deters walking and cycling.

6.5. Hereford is identified in the LPCS as the county’s main settlement for growth and development, and the principal economic centre of the sub-region. The LPCS provides for regeneration of the city centre and development at three urban expansion areas, including Lower Bullingham on the southern edge of Hereford, where 5 hectares of employment land and a minimum of 1,000 homes are to be provided. In addition, the HEZ at Rotherwas will provide a major catalyst of additional economic activity to the City of Hereford and the wider economy, with a range of plots available for immediate development, and incentives for locating there including business rate relief and simplified planning arrangements.

6.6. As a consequence of this growth, demand for travel in the peak hours across the City of Hereford is forecast to grow considerably. There is expected to be an increase in car, Light Goods Vehicle and Heavy Goods Vehicle traffic. This growth is forecast to impose significant adverse impacts on the transport network which, without intervention, will lead to deterioration in network performance against a number of indicators relating to congestion and transport emissions.

6.7. Traffic capacity problems have the potential to limit growth, particularly at the HEZ. The HEZ is the subject of a Local Development Order which simplifies planning arrangements by granting consent for certain forms of development, subject to conditions. Traffic generated by developments on the HEZ will increase vehicular movements on the A49 and has the potential to cause further congestion at certain points on that network. Until works have been undertaken to enable the whole of the HEZ to be developed without exceeding the vehicular capacity of the A49(T), caps have been set by the Local Development Order on the extent of new employment floor space that may be developed. The cap is based on a maximum number of additional vehicle trips permitted to be generated from the HEZ since the date of the Local Development Order coming into effect (the development trip limit). A
Memorandum of Understanding between the Council and Highways England sets this development trip limit at 257 vehicle trips in the morning peak period and 219 vehicle trips in the evening peak period.

6.8. The A49(T), the A465 and Holme Lacy Road radiate out through the South Wye area connecting from Greyfriars Bridge, the main river crossing. Whilst the Rotherwas Access Road enables vehicular traffic, including freight, to avoid the urban area between the A49(T) and the HEZ, there is no such equivalent between the A49(T) and the A465. In response to the congestion on radial routes including the A465 and A49(T), many drivers re-route on alternative routes to find a quicker way to their destination. The alternative routes on more minor roads over a wide area south west of Hereford, tend to be unsuitable, running through rural communities. These include the C1226 Haywood Lane and the C1228 between the B4348 and Haywood Lane. The introduction of the SLR will substantially reduce traffic flows along these routes.

6.9. Journey time surveys are undertaken bi-annually on Hereford’s key radial routes and reported in the Local Transport Plan Annual Progress Report. The most recent available data (2015-16) indicates that average journey times have considerably lengthened over recent years in the morning peak. Average journey times in the evening peak have shown a more minor upward trend but have fluctuated substantially between survey dates.

6.10. Vehicle traffic in the South Wye area contributes to poor air quality and high noise levels, impacting on key nearby receptors, such as schools and homes. The Air Quality Management Area, designated by the Council in 2006, includes the Asda Junction. It was designated due to breach of the annual mean objective for Nitrogen Dioxide (NO2), with vehicle exhaust emissions being a key source. A local air quality assessment at 11 locations across the South Wye area in 2014 found higher concentrations of NO2 along roads with higher volumes of traffic and levels of congestion, including the A49(T) and A465. Similarly, a baseline noise survey in 2014 found that noise levels within close proximity to the A465 and the A49(T) were high, at over 70dB(A). Noise mapping by the Department for Environment, Food and Rural Affairs identifies that the top 1% of the national population affected by highest levels of noise from major roads includes locations within the built-up areas of Hereford adjacent to the A49(T) and A465.

6.11. The LTP highlights that around half of all car journeys in Hereford at peak times are short trips of less than 2 miles long with start and end points in the urban area. Automatic traffic count data shows that there are substantial differences in traffic flows between the edge of the City of Hereford and close to the Asda Junction, highlighting the number of motorised journeys generated within the South Wye area itself. Incorporating more journeys made by walking, cycling and public transport into daily life is acknowledged to be one of the easiest ways to be more active and avoid the greatest risks to health from inactivity. Many residents have low levels of physical activity, with knock-on effects in terms of obesity and resultant poor health. 29% of adults in South Wye are classed as being obese; a higher level than the city, county or regional averages.
6.12. Parts of the A465, including sections within the Hereford urban area, have trunk road characteristics, being very wide with extensive areas of white hatched road markings and dedicated right turn facilities. This type of road design, combined with the high levels of traffic, creates community severance and acts as a substantial barrier to walking and cycling journeys. It reduces the ability of residents to make local journeys safely, cheaply and healthily on foot or by cycle, including journeys to essential services and schools. The 2011 census identifies that in some South Wye neighbourhoods less than 50% of households have access to car or van, compared to 75% of South Wye and Hereford City households as a whole. These neighbourhoods are therefore more reliant on non-car transport modes to access employment, education, retail and leisure facilities, health services and wider opportunities and more likely to feel the impacts of severance.

6.13. Whilst South Wye has relatively high levels of cycling and some quality off-road routes there is not yet a full and continuous network of routes suitable for people of all abilities to use. Currently little dedicated and segregated highway space is given over to cycling on the main road corridors in South Wye.

6.14. Non-Motorised User casualties (pedestrians, cyclists and horseriders) account for 42% of all personal injury collisions which occurred in the South Wye area between November 2010 and November 2015. Analysis of the Stats19 data (collisions reported to the police) shows that there have been a number of pedestrian collisions on and around the A465 in the South Wye area with a cluster occurring at and around the A465/Goodrich Road junction, and concentrations of cyclist casualties at the Holme Lacy Road / Chestnut Drive / Hoarwithy Road junction and in the vicinity of the Tesco Roundabout on the A465.

6.15. The perception that cycling is unsafe and concerns regarding the danger posed by busy roads is commonly cited in consultation responses as a reason for people not walking and cycling. It appears in the top five reasons deterring walking and cycling in responses to the Hereford Household Travel Survey and 2015 Hereford Travel Survey, and as a key response to the Local Transport Plan consultation. Nearly 60% of those surveyed for the 2016 Department for Transport’s Public Attitudes to Transport report agreed with the statement that ‘it is too dangerous for me to cycle on the roads’ and this proportion rose to nearly 70% of women and more than three-quarters of the over 65s age group.

6.16. Bus use is well below national and regional averages, and following a decline in passenger numbers on urban services in Hereford between 2001 and 2009, numbers have since stabilised. Surveys for the Local Transport Plan Annual Progress Report 2015-16 indicates that bus punctuality fluctuates between each survey. More recent passenger transport monitoring undertaken in 2017 indicates substantial day-to-day variation in bus journey times on services operating in South Wye, including the 74, 78 and 88 bus routes. Poor punctuality reduces the attractiveness of the bus as a travel mode, leads to increased bus operating costs and can affect the frequency of services which can be maintained.

Relationship of the SLR to the South Wye Transport Package ("SWTP")
6.17. The SLR forms part of the SWTP which contains a range of measures to address transport-related problems in parts of Hereford south of the River Wye. A set of intervention-specific objectives for the SWTP have been derived from analysis of current and future conditions and following the confirmation of the need for intervention, the objectives are as follows:

- Reducing congestion and delay;
- Enabling access, including to developments such as the HEZ;
- Reducing growth in emissions;
- Reducing traffic noise;
- Reducing road accidents; and
- Encouraging physical activity.

6.18. The SWTP objectives particularly accord with LTP objective 1 (enable economic growth), 3 (promote healthy lifestyles), and 4 (make journeys easier and safer). The objectives aim to address the range of inter-related problems currently experienced in the South Wye area, as described above.

6.19. A broad range of options, covering a range of modes, approaches and scales of intervention, have been considered as potential means of addressing the identified issues in the South Wye area. These were identified from adopted policies, previous studies and have been supplemented by stakeholder suggestions. Following sifting and packaging of options in line with Department for Transport guidance, the options comprised:

- Link Road between A49(T) and A465 (a southern link road);
- ‘Sustainable transport max’ (now known as active travel measures), which aimed to improve public transport, cycling and walking infrastructure; and
- ‘Traffic max’, aiming to create maximum capacity for vehicles on the main road corridors in the urban parts of the South Wye area.

6.20. Assessment in accordance with Department for Transport guidance identified that none of the approaches would satisfy all of the study objectives referred to in para 6.17 above. The ‘traffic max’ approach would not provide substantial benefit within the South Wye area nor does it satisfy any of the study objectives. Therefore, this approach was not been deemed feasible and did not undergo further assessment.

6.21. The ‘sustainable max’ and the SLR options contribute to the delivery of the study objectives, with each performing better against different assessment areas, but were not considered to satisfy all of the objectives in isolation. On that basis those two options were combined to deliver a package (SLR + sustainable transport max) which performs well across the majority of the assessment areas.

Development of the Scheme and Options

6.22. Having identified the need for a southern link road, the Council commissioned Amey to carry out the Hereford Relief Road South Core – Corridor Assessment which reported its findings in May 2012. It considered six routes, two of which (SC1 and SC2) originated from the Hereford Relief Road Study Of Options Report (Amey, September 2010) and a further four (SC3-6)
arose from a review of the Department of Transport route from the 1990s. The *Belmont Transport Package Stage 2 Appraisal* (Amey, February 2013) included an additional two routes for consideration. Route SC2A followed route SC2 but would pass underneath the railway rather than over it, and SC7 was a hybrid of routes SC5 and SC6.  

6.23. On the basis of the technical work in the Stage 2 Appraisal, the four better performing, southern, routes (SC2, SC2A, SC5 and SC7) were taken forward for further consideration. The more northerly routes (SC1, SC3, SC4, SC6) were discounted, mainly on the basis of the environmental impacts, and the significant cost required to mitigate these impacts. The main impact identified with these northern routes would arise from traversing Newton Coppice and Hayleasow Wood, categorised as Ancient Semi-Natural Woodland.

6.24. Routes SC2, SC2A, SC5 and SC7 were presented at the formal Public Consultation Exhibition held in Hereford between 30 June and 3 July 2014, as follows:-

6.24.1 located at the southern edge of the previously identified southern link road route corridor. The route crosses over the railway line and underneath Haywood Lane;

6.24.2 a variation on route SC2, except that the new road would pass underneath the railway line;

6.24.3 located further north of the SC2 and SC2A within the southern link road route corridor and south of the Merryhill Lane, crossing under the railway line and Haywood Lane; and

6.24.4 similar to the SC5 but with a more sinuous alignment to avoid environmental designations.

6.25. A number of alternative alignments or amendments to the shortlisted routes were suggested by the public and third parties during the summer 2014 public consultation. Three additional routes were deemed viable and were appraised to the same level of detail as the four initial routes. These were assigned route references SC8, SC8A, and SC9. Following the principles set out in government guidance, each route was assessed against economic outcomes, impact on the environment and social implications, as well as a review against stakeholder acceptability and deliverability. This process is documented in the South Wye Transport Package Preferred Option Report (*the Preferred Option Report*), forming part of the Cabinet meeting papers for 13 November 2014. This report identified that all of the routes provide many benefits to the economy, including reduced congestion, improved journey times and enhancing access to the HEZ, for example. All crossed undeveloped land and had a negative impact on aspects of the environment, including heritage, biodiversity and landscape.

6.26. The Preferred Option Report concluded that, on the basis of the information available at the time, SC2 was the best performing route within the technical appraisal. It also received the highest level of support of the four routes taken to public consultation. This proposal was brought forward and the Cabinet meeting of 13 November 2014 resolved that SC2 be selected as the preferred route. This decision was called-in and discussed by the General Overview and Scrutiny Committee at their meeting of 2 December 2014, following which it

---

1 Two plans showing the different route options are appended in Appendix B
was resolved to refer the preferred route decision back to the Cabinet, for them to re-

examine in the light of the committee’s discussions. Taking the committee’s information into account, route SC2 was confirmed by Cabinet on 18 December 2014. The SC2 route is the proposed route of the SLR.

6.27. An application for planning permission for the Scheme, described in the application as “New single carriageway (Southern Link Road) and associated works”, was made on 8 May 2015 under application reference: P151314/F (the “Planning Application”). The Planning Application covers only the road itself and the works required to construct the SLR and does not deal directly with other improvements and measures being considered and implemented by the Council as part of the active travel measures alongside the SLR. Most of the possible active travel measures do not require planning permission. Planning permission was granted on 18 July 2016 for the SLR. Condition 21 of the planning permission requires that a weight restriction is implemented and effective on Belmont Road prior to the first operation of the SLR, unless otherwise agreed.

6.28. Documents were submitted as part of the Planning Application, including the Transport Assessment (the “South Wye Transport Package – Southern Link Road Transport Assessment”, May 2015) and a briefing note on the transport impacts and benefits (dated September 2015). Their findings outline that, with the SLR and Clehonger Link opened, traffic flows are forecast to decrease on key sections of the A49(T), the A465, Walnut Tree Avenue, Holme Lacy Road, the newly-created cul-de-sac section of Clehonger Road and rural roads south-west of Hereford. Traffic is predicted to increase on sections of road closest to the SLR as traffic re-routes to take advantage of the reduced journey time and improved accessibility. This indicates that the proposed road is fulfilling its intended purpose with traffic diverting to the new route and creating spare capacity on other roads.

6.29. The SLR is predicted to provide journey time improvements in comparison to the existing routes and journey times are predicted to be shorter, particularly for east-west journeys to the HEZ. Data from the 2016 traffic model indicates that, with the SLR in place, journeys via the SLR/Rotherwas Access Road route would be substantially quicker than via Belmont Road/Walnut Tree Avenue/Holme Lacy Road, when measured from the A465/B4348 crossroads (Lock’s Garage) to B4399 Rotherwas Access Road/Straight Mile roundabout. The comparison of journey times between 2016 and 2032 for the morning peak hour also illustrates the severe worsening of congestion in the area if no SLR was to be provided. The SLR enables improved accessibility to the HEZ.

6.30. The A465 experiences net benefit from the SLR being constructed with reductions in vehicle flow over most of its length, but traffic will increase in areas closest to the SLR, as traffic re-routes to use the SLR. Journeys are forecast to be shorter in scenarios with the SLR in place, as compared to the scenarios without it. Most of the A49 Ross Road will experience some traffic relief as a result of the SLR being constructed and, as with the A465, those sections of the A49 which will experience an increase tend to be those which are closest to the SLR as traffic finds its way to and from the new route.

Development of active travel measures
6.31. As highlighted above, the SWTP preferred package is a combination of a southern link road as well as a set of measures to improve travel for pedestrians, cyclists and bus users (referred to as active travel measures). These active travel measures are currently being identified and progressed for various locations across South Hereford. These measures, together with the SLR, address the SWTP objectives.

6.32. The following nine groups of possible active travel improvements were consulted on:
- 20mph residential areas;
- Belmont Road bus priority measures;
- Belmont Road walking and cycling improvements;
- Belmont Road weight restriction;
- Belmont Road (West) walking and cycling improvements;
- Better walking and cycling routes to HEZ;
- Hoarwithy Road and Hinton Road walking and cycling links;
- Holme Lacy Road - further walking and cycling improvements; and
- Walnut Tree Avenue / Hunderton Road traffic reduction.

6.33. The public consultation on possible active travel improvements ran for six weeks during September and October 2016 and the Public Consultation Report was reported to Cabinet on 14 December 2017. The Public Consultation Report outlined that all the possible improvements consulted on received more support than opposition. The highest levels of strong support was for 20 mph speed limits in residential areas, followed by the Belmont Road walking and cycling improvements and the Belmont Road (West) walking and cycling improvements. The greatest levels of strong opposition were for Belmont Road bus priority measures followed by Walnut Tree Avenue / Hunderton Road traffic reduction. At the Cabinet meeting on the 14 December 2017 it was resolved that Council officers be authorised to carry out further analysis and detailed design to confirm a preferred package of active travel measures to be delivered with the SLR, along with a programme for their implementation. These measures do not form part of the scheme for which the Compulsory Purchase Order is being sought.

6.34. The active travel measures which are proposed for the South Wye area are aimed at encouraging and enabling more journeys to be made on foot, by cycle and public transport, including the transfer of some journeys currently made by motor vehicle. They are anticipated to bring about significant benefits, particularly in economic and social terms, such as through improved physical activity, reduced congestion and improved accessibility.

7. **THE JUSTIFICATION AND NEED FOR THE CPO**

7.1. The powers under which the Council will make the Order are set out in section 3 above but it has been established that the Council is authorised by statute to make the Order.

*Progress with acquisition by agreement*
7.2. As can be seen from the Order Map, the Order Land comprises land in a number of ownerships (including land in the ownership of the Council), needed for construction and implementation of the Scheme. As set out at paragraph 1.7 above, the Council understands and acknowledges that the compulsory purchase of land should be a measure of last resort where negotiations have been unsuccessful and that there should also be a compelling case in the public interest that sufficiently justifies interfering with the rights of those with an interest in the land.

7.3. The Council has entered into negotiations with all relevant parties in respect of the acquisition of the necessary land and rights. All landowners with an interest in the Order Land have been approached to ask if they would be prepared to negotiate the acquisition by agreement of their interest in the Order Land.

7.4. Terms for acquisition of the land and rights required for the SLR have been agreed with six of the landowners and the necessary agreements are being drawn up between the Council and the landowners’ solicitors. Negotiations continue with the other landowners with a view to minimising delays to the Scheme that may otherwise arise from procedural and statutory timescales to be complied with and resulting from acquisition by compulsory purchase.

7.5. As the SLR will pass over the Hereford to Newport railway line, the Council have worked closely with Network Rail over a long period of time in connection with the Scheme. An Approval In Principle Design has been submitted to Network Rail and technical approval has been received. Detailed discussions have resulted in agreement over such matters as the required headroom under the bridge, lateral clearances to the abutments, the required upgrades to fencing in the immediate vicinity of the bridge, the type of parapets over the railway and the colour choice for the bridge. The discussions have also closely examined the best means of construction to minimise the risk of disruption to train operations and the possible impacts of the scheme upon Network Rail’s signalling and telecommunications equipment.

7.6. The Council and Network Rail have also collaborated closely to negotiate with the authorised users of a privately owned pedestrian crossing close to the proposed “Railway Underbridge” and an agreement in principle has been reached with those users to close this crossing. The closure of the crossing will reduce risks to the safe operation of the railway and eliminates the likely need for future improvement works to the crossing.

7.7. A Bridge Agreement has been drafted and Deeds of Easement are being finalised. These are the legal documents that provide for the construction and future maintenance of the bridge over the railway, as well as a pipe crossing underneath the railway which is required for land drainage.

7.8. However, as the Council cannot ensure that it can obtain all the land and rights that it requires by negotiation, the Order is needed to secure implementation of the Scheme. The Council as the Acquiring Authority and in accordance with its powers and duties as highway authority cannot achieve its objectives and the objectives of the SWTP without acquiring all of the Order Land. The compulsory acquisition of the land will, in short, enable the works to
be carried out by providing certainty and thereby ensure the works can be programmed. This will enable the Council to achieve its objectives in the timeliest and most cost effective manner, in the public interest overall.

8. **THE JUSTIFICATION AND NEED FOR THE SIDE ROADS ORDER**

8.1. The purpose of the Side Roads Order is to maintain access to all land and property directly affected by the Scheme and to make necessary changes to the highway network. In order to build the SLR, it is necessary to improve, or stop up, existing highways and construct new highways to link into the SLR. It will also be necessary to stop up some existing private means of access to land and premises and to replace those where necessary with new means of access. To enable it to do these works the Council is promoting the Side Roads Order.

8.2. The Council also considers that it can meet the statutory test in that another reasonably convenient route is available or will be provided before the relevant highway or private means of access affected by the Side Roads Order is stopped up.

8.3. Highways to be improved under the Side Roads Order are:-
   - B4349 Clehonger Road
   - The junction with B4349, Clehonger Road and A465, Abergavenny Road
   - Golden Post Road leading to “Pykeways”
   - A465, Abergavenny Road
   - Haywood Lane, north east of Haywood Lodge Cottages
   - Grafton Lane from Green Inn to south of Ashley Farm

8.4. New highways to be created are:-
   - New public footpath as re-routed part of public footpaths Nos. CH9, HA3, HA7 and GF3

8.5. The highways to be stopped up are:-
   - B4349, Clehonger Road from a point leading in an easterly direction from Copper Beeches for approximately 397 metres and ending at Forest View
   - Golden Post Road from a point leading to the southeast of Copper Beeches and proceeding for a distance of 175 metres and ending at “Pykeways”
   - A465, Abergavenny Road from a point 65 metres in a north easterly direction from Golden Post Cottage for a distance of 99 metres
   - Public footpath No. CH9 from a point 13 metres in a south westerly direction proceeding from Copper Beeches for a distance of 33 metres
   - Public footpath No. HA3 heading in a south easterly direction and leading for a distance of 528 metres
   - Public footpath No. HA7 in an easterly direction from Roman Byre for a distance of 420 metres south of Beech Grove
   - Public footpath No. GF3 from a distance of 560 metres proceeding in a north westerly direction from Grafton Wood and leading and ending southwest of Cedar Folly
8.6. The private means of access to be stopped up are:-

- Access north east of Copper Beeches
- Access to field 33 metres southwest of the main entrance to Copper Beeches
- Access to field 12 metres from a point at its junction with Copper Beeches and Clehonger Road
- Access to field off Haywood Lane leading to Beech Grove

8.7. The new private means of access to be created are:-

- Access to field east of Copper Beeches
- Access to field the north of Forest View
- Access to the field east of Pykeways
- Access to the field south of Abbey Cottages
- Access to field at Dunan Lodge with Public Footpath CH10 to its north
- Access to Pykeways
- Access to field south of Pykeways
- Access to field off Abergavenny Road with Golden Post Cottage to the north
- Access utilising the agricultural underpass
- Access to the north of Haywood Lodge Cottages
- Access to field south of Beech Grove
- Access to field off Grafton Lane
- Access to the north of Grafton Wood

9. **PLANNING POSITION – IMPEDIMENTS TO THE SCHEME**

9.1. The LPCS was adopted by the Council in October 2015 and forms the current development plan for the County. The Callow and Haywood Group Parish Council Neighbourhood Development Plan was made on 1st December 2016. The National Planning Policy Framework (the “NPPF”) was also a material consideration.

9.2. Policy SS1 of the LPCS and paragraph 14 of the NPPF promote a presumption in favour of sustainable development. Policy SS1 of the LPCS sets out that the Council is committed to securing development to improve social, economic and environmental conditions in the County. Policy SS3 of the LPCS acknowledges the need to work with developers, Highways England and transport providers. Policy HD3 of the LPCS seeks to facilitate access and maximise connectivity within the city to reduce congestion, support future prosperity and enable growth.

9.3. As set out in section 6 above, the LPCS states that the key element of the long-term Hereford transport strategy is the requirement for a relief road and identifies that the first section of the relief road to be constructed will be the section between the A49 and A465. This stand-alone scheme is known as the SLR and forms part of the SWTP.

9.4. As set out above, the Callow and Haywood Group Neighbourhood Development Plan is now adopted. Policy CH2 sets out that proposals for new roads and in particular, the new SLR will
need to meet requirements to reduce adverse impacts. These include routing roads to integrate with the natural landscape, minimising use of artificial lighting, high quality landscaping, suitable road surface materials used to reduce noise, provide access for wildlife, include provision of appropriate water management and storage, continued access for public footpaths, cycleways and bridleways, continued access for landowners and avoiding severing local lanes. Although the Plan was not adopted at the time the planning application for the SLR was submitted, all of these matters were material considerations and taken into account when preparing the Planning Application and mitigation included where required to ensure that any adverse impacts are reduced where possible. This also accords with policy HD3 of the LPCS which states:

“The road will be designed and developed in such a way which avoids and mitigates adverse impacts or physical damage to or loss of habitats, noise pollution and vibration, light pollution, air pollution, flood risk and water quality, as well as residential amenity and business interests. Consideration of the impact of the road on heritage assets, their significance and setting, as well as the historic character of the wider landscape will also be required.”

9.5. As stated in section 6 above, the Planning Application was made on 8 May 2015 under Application Number: P151314/F. The application was subject to a request by a third party to call in the application by the Secretary of State but, after considering the call in policy, the Secretary of State decided not to call in the application, being content that the application should be determined by the Council as local planning authority.

9.6. Planning permission for the Scheme was duly granted on 18 July 2016. It was not the subject of any legal challenge. It remains valid and extant subject to implementation in July 2019. As such, the requirement for planning permission is not an obstacle to the Council bringing forward the SLR.

9.7. In the unlikely event that the Scheme is not implemented by July 2019 a new application will be made. Whilst the planning authority cannot fetter its discretion with regard to a future decision, in light of the clear policy support for the Scheme there is an evident presumption under s.70 and s.38(6) of the Planning and Compulsory Purchase Act 2004 as well as the Government policy set out in the NPPF in favour of the Council granting a renewed permission in accordance with its previous decision to grant.

9.8. Further to undertaking more detailed design prior to construction, works in relation to drainage for the SLR, as well as maintaining existing drainage systems serving properties and agricultural holdings, have been identified as required to implement the scheme. Some of these works fall outside of the planning application boundary for the SLR. These works will be subject to a separate planning application to be submitted in June 2018. Again, given the policy support for the Scheme there is no evident barrier or material consideration that would lead to this application being refused.

9.9. In addition, as a result of detailed negotiations with landowners, works to maintain access to agricultural holdings without causing severance, including creation of accesses onto
classified highways, will also be subject to a separate planning application. Following submission of a prior notification in January 2018, confirmation that some of these works are subject to permitted development rights in accordance with the Town and Country Planning (General Permitted Development) Order 2015 was received in March 2018.

9.10. The further planning application will also include an additional haulage route, which will remove heavy construction plant vehicular movements from the existing highway, reducing environmental impacts on properties located along the road (Haywood Lane).

9.11. A change of use of part of Golden Post Road to a residential garden will also be sought where the carriageway is being broken up and ownership transferred to a neighbouring resident.

9.12. The Council confirms that it is able to meet the pre-commencement conditions attached to the Planning Permission and can therefore confirm that there are no planning impediments to the Scheme proceeding if the Orders are confirmed.

10. **HUMAN RIGHTS CONSIDERATIONS**

10.2. Section 6 of the HRA prohibits public authorities from acting in a way which is incompatible with the Convention. Articles 6 and 8 of the Convention and Article 1 of the First Protocol of the Convention are considered to be relevant by the Council.

10.3. The Council has duly considered the rights of property owners under Article 1 of the First Protocol of the Convention, which provides for the peaceful enjoying of possessions. Article 1 further provides that no one shall be deprived of possessions except as provided for by law or where it is in the public interest. It is considered that the Order will strike a fair balance between the private loss of property and the public interest in securing the implementation of the Scheme.

10.4. Article 6 of the Convention provides that everyone is entitled to a fair and public hearing in the determination of their civil rights and obligations. It is considered that the statutory procedures, which give the right to object and provide for judicial review, are sufficient to satisfy the requirements of this Article.

10.5. The Council has also considered the rights contained in Article 8 of the Convention. This provides that everyone has the right to respect for their private and family life and that there shall be no interference by a public authority with the exercise of this right except in accordance with the law, where there is a legitimate aim and where it is fair and proportionate in the public interest. It is considered that any interference caused by the Order will fall within these exceptions having regard to the public benefit which will accrue from the Scheme.
10.6. The Council has been conscious of the need to strike a balance between the rights of the individual and the interests of the public. It has considered the effect of the Articles and decided that on balance, and in light of the significant public benefit that would arise from the Scheme and the nature of the Order Land, it is in the interest of the wider community to make the Order over and above the interests of any individuals affected. Any interference with the Convention rights is considered to be justified in order to secure the transport benefits and the economic regeneration that the Scheme will bring. Appropriate compensation will be available to those entitled to claim it under the relevant statutory provisions.

11. **FUNDING**

11.1. The total estimated cost of the Scheme will be £35m and is as set out in the Strategic Outline Business Case. This document sets out that the Scheme is viable and the case for investment in the Scheme.

11.2. Funding of £27m has been secured from the Marches LEP Growth fund and a contract has been signed with the Marches LEP for this funding. The remaining £8m will be funded by the Council and has been committed to by inclusion in the Councils Capital Programme.

11.3. The Council is therefore confident it can provide sufficient proof that the Scheme is viable and has sufficient funding available at an early stage following the confirmation of the Order and to allow for the implementation of the Scheme as well as requisite funding for compensation.

*Ecological Habitat Mitigation*

12.1. The SLR will pass through Grafton Wood, an area of scattered trees and grassland that is included as Ancient Semi-Natural Woodland on the Ancient Woodland Inventory held by Natural England. During preparation of the Environmental Statement for the SLR ("the ES") it was identified that approximately 0.53 ha of Grafton Wood would be lost under the Scheme footprint, with the remaining sections severed by the SLR. The potential for operational impacts on retained sections of Grafton Wood was also identified; these included winter salt spray and localised increases in air pollution. Due to the required alignment of the SLR, it was not possible to avoid or mitigate these impacts. It was therefore necessary to develop a compensation scheme to address the predicted impacts and the loss of trees and habitat. This land has been included as part of the Order Land.

12.2. The DEFRA offsetting metric was used informally to guide an assessment of the extent of the compensatory habitat that should be provided, combined with the results of the ecological surveys and the professional judgement. The ecological assessment provided in the ES
identified that a minimum of 3.42 ha of compensatory habitat should be provided to address predicted impacts on Grafton Wood.

**Landscape Mitigation**

12.3. The following measures have been implemented within the landscape design to mitigate the effects on the landscape of the SLR:

- the southern embankment slopes either side of the Railway Underbridge will be eased to 1:4 slopes instead of the standard 1:2 engineered slopes to blend better with the surrounding landform and minimise intrusion into views, some of which are in close vantage;
- a new area of woodland will be planted adjacent to Grafton Wood (as referred to in paragraphs 12.1 to 12.2 above); and
- 4725m of species rich native hedgerow will be planted alongside the SLR to tie into existing hedgerows and maintain wildlife corridors, and to mitigate the loss of 2279m of species-rich/species-poor hedgerow habitat. Additionally, 359m of hedgerow will be translocated.

12.4. In addition to the above mitigation measures included within the landscape design, the following measures have been included to address the concerns raised by Historic England and mitigate impact on the setting of Haywood Lodge:

- increase the density of the planting on the southern embankment of the Railway Underbridge, including the use of native evergreen species, to form a linear belt of trees and shrubs. Planting width will be a minimum of 10m to provide an adequate screen; and
- a close boarded timber fence on either side of S05 will extend for 45m beyond the structure, in order to provide additional screening of vehicular lights to Haywood Lodge as the vehicles cross the bridge.

**Flood Attenuation**

12.5. The attenuation basins are required to retain surface water runoff from the SLR until after the peak of the storm has passed. Further outfalls are required which utilise storage pipes for attenuation of surface water; the storage pipes will also retain flows until after the peak of the storm. Whilst the flows are attenuated pollutants will be removed from the surface water runoff.

12.6. The basins and storage pipes are located in such a way that the surface water runoff can be conveyed through gravity, via pipes and chambers to the attenuation systems. The basins and storage pipes have been designed such that they do not overflow for the 1:100 year (1%) event + 30% additional allowance for climate change. All of the basins and storage pipes have been located at appropriate locations to outfall into Withy Brook and Newton Brook.

13. **SPECIAL CONSIDERATIONS AFFECTING THE ORDER LAND**

13.1. There are no special considerations affecting the Order Land.
13.2. The Order Land is not located within a conservation area and there is no consecrated land, renewal area land, allotment land or open space included within it. None of the Order Land is held inalienably by the National Trust.

13.3. The works to construct the A465 roundabout may impact the site of a statutory designated Grade II listed milestone (Milestone HA01/LB 155380). However, this milestone is believed to be missing and therefore no mitigation measures are proposed.

14. **RESPONSES TO OBJECTORS**

14.1. Twenty seven objections to the Order were received by the Secretary of State, consisting of seven objections from statutory objectors and twenty objections from non-statutory objectors. A summary of each of the objections together with the Council’s response is set out in the table contained at Appendix 1.

14.2. It is noted that the majority of the issues raised by the non-statutory objectors relate to the Underlying Scheme which has already been subject to a full planning application procedure which enabled objections to be made to the Scheme at that stage. The planning merits of the Scheme are therefore not a matter for debate as part of this process. The Council has nevertheless sought to set out and address the concerns raised by non-statutory objectors in any event.

15. **OTHER INFORMATION THAT MIGHT BE OF INTEREST TO THOSE AFFECTED BY THE CPO**

15.1. Anyone who considers that they are affected by the Order can contact Mairead Lane by telephone on 01432 260944 or Ian Higgs on 01432 261569 during normal office hours.

15.2. Links to/copies of the relevant documents for the Inquiry can be accessed, and further information can also be found on the SLR on the Council website, at: https://www.herefordshire.gov.uk/info/200196/roads/252/hereford_2020/5

15.3. The Statement of Case for making the Order is intended to discharge the Council’s statutory obligations under the Compulsory Purchase (Inquiries Procedures) Rules 2007 and The Highways (Inquiries Procedure) Rules 1994 in the event of a public local inquiry being held.
RELEVANT DOCUMENTS FOR INQUIRY

Should it be necessary to hold an Inquiry into the Order and/or the Side Roads Order, the Council may refer to or put in evidence the following documents. The Council reserves the right to add to or amend the list as necessary and will endeavour to notify the Inquiry and any remaining objectors of any such documents as soon as possible prior to the opening of the Inquiry:
