# Technical Assessment

## Flood Risk

Zone 1 - Development is appropriate. A flood risk assessment will be required for sites greater than 1 ha in size. Nearby ordinary water courses and other sources of flooding, such as surface water flooding, should be explored for potential flood risk.

## Water Information

Operator(s): Dwr Cymru Welsh Water - will provide comment as part of the Rural Areas Site Allocation Development Plan Document consultation.

## Biodiversity Information

No protected species or statutory habitats recorded at this location.

## Highways Information

Access: Maybe
Connectivity: Poor
Access comments: Close proximity to A40 which is a major trunk road. Site access is through the property. A new access could be made onto un-adopted track at the back of the site, but major upgrades would be required.
Other comments: Needs good sustainable transport links to Ross- possible cycle facilities on A40.
Conclusion: There are some issues with this site.

## Landscape Information

Description: The site is situated in the Wye Valley AONB, forming part of a larger arable field. Bounded by hedgerow with hedgerow trees. Landscape Character type is Principal Settled Farmlands.
Capacity: Moderate capacity - Potential for roadside development on the lower contours of the site, but not on the higher contours of the land.
Mitigation: Retention of hedgerow, and additional hedgerow tree planting.

Potential site capacity 4

Potential of the site coming forward for development

<table>
<thead>
<tr>
<th>Probability</th>
<th>Low potential</th>
</tr>
</thead>
</table>

Justification

The site is situated within the Wye Valley AONB therefore new development is recommended in the lower ground of the site as roadside development. There is a bungalow within the site so a layout incorporating this would be necessary. Highways have identified the unadopted track as being a potential access, but major work would be needed here and this may not be acceptable in landscape terms. The existing bungalow access has potential, but clarification on how many dwellings would be acceptable would need to be sought.

Technical Assessment

Flood Risk
Zone 1: Development is appropriate. A flood risk assessment will be required for sites greater than 1 ha in size. Nearby ordinary water courses and other sources of flooding, such as surface water flooding, should be explored for potential flood risk.

Water Information
Operator(s): Dwr Cymru Welsh Water- will provide comment as part of the Rural Areas Site Allocation Development Plan Document consultation.

Biodiversity Information
No protected species or statutory habitats recorded at this location.

Highways Information
Access: Maybe
Connectivity: Reasonable
Access comments: Close proximity to the A40 which is a major trunk road. Access to the adopted lane is steep, however, and may need grading out.
Other comments: Needs good sustainable transport links to Ross- possible Cycle Facilities along A40.
Conclusion: There are some issues with this site.

Landscape Information
Description: Within the Wye Valley AONB. Rising landform. Former orchard, remnants of which are in the roadside hedgerow. The Landscape Character Type is Principal Settled Farmlands. The lower contours of the site are well contained. There is an existing roadside pattern of built form. The higher contours are prominent in the wider landscape to the east.
Capacity: Moderate - Potential for roadside development on the lower contours of the site.

### Potential site capacity

- Potential site capacity: 8

### Potential of the site coming forward for development

<table>
<thead>
<tr>
<th>Probability</th>
<th>Medium potential</th>
</tr>
</thead>
</table>

### Justification

Due to the site's location within the Wye Valley AONB, the landscape here is contoured therefore new housing would be more suitable along the roadside, where the ground is lower. The access to the site is along a steep narrow rural road and work may be require to make this acceptable. This may affect the site's viability in coming forward. There is currently a valid outline application on this site for 9 dwellings P172076/O.

### Technical Assessment

#### Flood Risk
Zone 1 - Development is appropriate. A flood risk assessment will be required for sites greater than 1 ha in size. Nearby ordinary water courses and other sources of flooding, such as surface water flooding, should be explored for potential flood risk.

#### Water Information
Operator(s): Dwr Cymru Welsh Water- will provide comment as part of the Rural Areas Site Allocation Development Plan Document consultation.

#### Biodiversity Information
Habitat of Principal Importance: Deciduous Woodland covering the South Eastern corner of the site.

#### Highways Information
Access: Yes  
Connectivity: Reasonable  
Access comments: Good access to the A40, which is a major trunk road.  
Other comments: River/stream running through the plot. Needs good sustainable transport links to Ross- possible cycle facilities along A40.  
Conclusion: There are some issues with this site.

#### Landscape Information
Description: Within the Wye Valley AONB. The Landscape Character type is Principal Settled Farmlands. Bounded by watercourse to the east, with mature trees along the grass verge. There is an extensive tree belt to the west.  
Capacity: Moderate capacity for roadside development along lower contours.  
Mitigation: Retention of the brook and existing trees, use of the existing access.

**Potential site capacity**  10

## Potential of the site coming forward for development

**Probability**  Medium potential

**Justification**

There is potential for roadside development along the lower contours of the site. Highways comments regarding the road access (similar to HLAA/496/001) also need to be taken into account. It would be essential to retain the brook and existing trees therefore a rear access would be more desirable.
Basic Information

Technical Assessment

Flood Risk
Zone 1: Development is appropriate. A flood risk assessment will be required for sites greater than 1 ha in size. Nearby ordinary water courses and other sources of flooding, such as surface water flooding, should be explored for potential flood risk.

Water Information
Operator(s): Dwr Cymru Welsh Water- will provide comment as part of the Rural Areas Site Allocation Development Plan Document consultation.

Biodiversity Information
No protected species or statutory habitats are recorded at this location.

Highways Information
Access: Maybe  Connectivity: Good
Access comments: Good access to A40, which is a major trunk road.
Other comments: PROW MO15 runs along the western boundary. Needs good sustainable transport links to Ross- possible cycle facilities on A40.
Conclusion: There are some issues with this site.

Landscape Information
Description: Within the Wye Valley AONB. The Landscape Character type is Principal Settled Farmlands. The site comprises rising land, forming part of a larger arable field. There are views to the east to the wider landscape. It also features a row of mature silver birch.
Capacity: Low - Moderate capacity for roadside dwellings of single storey along existing access road.
Mitigation: Mitigation needed along the eastern edge of domestic curtilage.
