

Electric Vehicle Charge Points

General Information

Charge points currently installed

Fast chargers

- In 2013 and 2014, 12 electric vehicle charge points were installed in 11 council car parks under the Plugged in Midlands grant scheme.
- These charge points were installed in 6 locations in Hereford city and 1 location in each of the 5 market towns. Prior to this there were no publically available charge points in the county.
- The charge points are dual fast chargers capable of supplying 7kW (32A) of charge from each of two sockets and can be accessed using a Type 2 connector.
- Since installation in 2013/14 electricity from the fast chargers is provided free to all charge point users.
- Since 2016, all fast charge points have been managed and maintained by bpChargemaster plc. as part of the bp pulse network.
- The network has been subject to a scheme of upgrades and replacements by Chargemaster and now all charge points are Chargemaster Fastcharge units.
- The locations and original installation dates are shown in the table below, together with the date of the most recent replacements (shown in red).
- The charge points in Ross on Wye and Bromyard were transferred over to local Town Council ownership in 2016.

Rapid chargers

- In 2020/21, 3 rapid charge points were installed by SWARCO on behalf of Highways England.
- The rapid charge points are located in council car parks in Hereford, Leominster and Ross on Wye and were installed to support EV drivers using the A49, which is part of the strategic road network.
- The 3 rapid charge points are capable of supplying 50kW of charge using tethered cables.

- Electricity from these charge points is subject to a tariff. The current tariff amounts are shown on the live maps.
- The locations of the rapid charge points are included in the table below coloured blue.

Location	Date installed / replacement	Type of charger and who managed by	Notes
Garrick Multi-storey car park, Hereford HR4 9EU	2013 2016	Fast charger bpChargemaster	
Venns Close car park, Hereford HR1 2HA	2013 2019	Fast charger bpChargemaster

Location	Date installed / replacement	Type of charger and who managed by	Notes
Tenbury Road car park, Bromyard HR7 4LL	2013 Not known	Not known	Owned by Bromyard and Winslow Town Council since 2016.

- The council has not removed any charge points since installation.

Parking at Charge Points

- All parking bays serving council charge points are reserved for electric vehicles (EVs) whilst recharging only.
- From installation in 2013 up until April 2017, parking for electric vehicles recharging was free and there were no maximum parking times.
- In April 2017 normal parking charges were applied to all charge point parking bays and a maximum stay of 4 hours introduced.
- Since March 2020 all EVs recharging are allowed 30 minutes free parking after which time normal parking charges apply. The 4-hour maximum stay remains.
- Two of the charge point parking bays at the council offices at Plough Lane are restricted to electric pool vehicles only.

Policy Links and Funding

- There is no budget allocated to the installation of electric vehicle charge points. All installations currently rely on government funding.
- Policy LTP ZLV 1 in the council's Local Transport Plan 2016-2031 commits the council to working with transport providers and businesses to encourage the use of more efficient vehicles; and supports increasing the availability of charging points for electric vehicles on Herefordshire Public Services owned premises.

Future Plans

1. An electric vehicle charge point strategy for Herefordshire Council is being developed.
2. Expansion of the council charge point network is planned through a concession contract that will be going out to tender in 2021/22.
3. A pilot scheme under the governments Onstreet Residential Chargepoint scheme is being explored.
